BEARING DIMENSIONS AND DESIGNATIONS

Parameters for dimensions and structure of bearing designations

The dimensions of bearings (bore, outer diameter, width) are internationally standardized.

BEARING DIMENSIONS

The size of a bearing has to be known for its installation on a shaft and in a housing. This is determined by the dimensions of the outer geometry of the bearing and includes:

- › Diameter of the bearing bore d
- › Outer diameter D
- › Nominal width B
- › Height of the bearing T
- › Corner chamfer r

Boundary dimension of radial ball and roller bearings

Boundary dimensions of single-direction thrust ball bearings

Comparison of the cross sections of thrust bearings (except diameter series 5) for various dimension series

Comparison of the cross sections of radial bearings (except tapered roller bearings) for various dimension series

BEARING DIMENSIONS AND DESIGNATIONS

The dimensions of snap ring grooves in the outer bearing rings are defined by ISO 464 and DIN 616. The snap rings are defined according to ISO 464 and DIN 5417.

Dimensions for snap ring grooves and snap rings

BEARING DIMENSIONS

The designations of the bearings consist of a combination of numbers and letters. They identify the following parameters:

- › Bearing type
- › Dimensions
- › Dimensional and running accuracy
- › Bearing clearance
- › Further details

The bearing designations of standard bearings are defined by JIS B 1513 and DIN 623. NSK also uses supplementary designations for a further classification.

Notes: ⁽¹⁾ For bearing bore numbers 04 to 96, five times the bore number gives the bore size (mm) -except for double-direction thrust ball bearings.

⁽²⁾ HR is prefix to bearing series symbols and it is NSK's original prefix.
